**AIUM** is a highly-flexible advanced image hosting solution for anyone who wants to offer an image hosting services of any kind. This also includes any general web hosting companies and auction websites.

**Notice:** Before you create your own file & image hosting site, make sure that you have the resources to do so! If you don't have a lot of space and bandwidth, you shouldn't run a file hosting service. If people upload files to your site and your site is taken down, they won't be very happy. Also make sure that it isn't against your host's terms of service to run a file host.

#### **How to install:**

- **upload all files and folders from the *aium\_v1.1.rar* file to your current AIUM Directory**
- **Open file config.php and set up**
- ***\$file\_size\_ind = "10240000"; (10 MB) enter values on bytes ! (102400 bytes = 100KB)***
- ***\$dir\_store= "store"; (the upload store directory,chmod to 777)***
- ***\$dir\_img= "img"; (the images directory)***
- ***\$style = "style-def"; (the style-sheet file to use)***
- ***\$file\_ext\_allow =***  
***array("gif","jpg","jpeg","png","txt","nfo","doc","rtf","htm","dmg","zip","rar","gz","exe");***  
***(the file type extensions allowed to be uploaded)***
- ***\$file\_list\_allow = 1; (option to display the file list, to enable/disable, enter '1' to ENABLE or '0' to DISABLE (without quotes))***
- ***\$file\_del\_allow = 0; (option to allow file deletion, to enable/disable, enter '1' to ENABLE or '0' to DISABLE (without quotes))***
- ***\$auth\_ReqPass = 0; (option to password-protect this script [-part1], to enable/disable, enter '1' to ENABLE or '0' to DISABLE (without quotes))***
- ***\$auth\_usern = "admin";***
- ***\$auth\_passw = "admin"; (option to password-protect this script [-part2], if "\$auth\_ReqPass" is enabled you must set the username and password)***
- ***\$LANGUAGE\_LIST = Array(***  
***"en"***  
***); (LANGUAGES: ENGLISH = en | ROMANA = ro | GERMAN = de)***

***When finished to configuring the script, your website is ready to do his job...😊***
